

190 North Pointe Blvd., Suite 1  
Lancaster, PA 17601

PATIENT INSTRUCTIONS  
*LANCASTER SKIN CENTER, P.C.*

**AFTER A SHAVE BIOPSY AND/OR ED&C**

You have had a procedure that will require some special wound care over the next 7-10 days:

1. Leave the bandage applied at the time of the procedure on the wound site until the next morning. Do not get the area wet for about 24 hours.
2. Tomorrow morning, remove the bandage. Gently cleanse the area with mild soap and water. Apply Aquaphor ointment or Vaseline to the site 1-2 times per day to prevent the wound from drying out. Studies have shown that wounds heal faster when kept moist under a bandage. Place a new bandage over the site each day. This wound care may be discontinued when the site is not “open” or crusty anymore.

If you have any questions, please call (717)-560-6444
